

# Disrupting Technology with a 100-Year Building Automation Control Network

# 100 Year Building

*Build* to *Last!*

# Disruptive Technology

- *Sustainable Infrastructure*
- *Proven Technology*
- *Upgrade not Obsolete*

## Past 100-Years

- 1920 – Pneumatic Relay (First Open Protocol)
- 1930 – Electromechanical Relay
- 1940 – Logic
- 1950 – Transistor
- 1960 – Integrated Circuit
- 1970 – Microprocessor
- 1980 – Direct Digital Control
- 1990 – Distributed Control (peer-to-peer)
- 2000 – Open Protocol
- 2010 – Cloud Based Data and Control

# Disrupting Technology

*Change* is a ***Constant!***

## Next 100 - Years

Where Does  
the next 100-Years  
Take Us?

## Control Networks

- Look at Past to Learn for the future.
- Seen an Electronics Revolution.
- Gone from Air to the Cloud.

*So what do we learn form the Past?*

# Capital Property

Control Systems are *Capital Property* not Personal Property

**Meaning:** The Control System has to last!

**Replacing/Upgrading:** 3 - 5 years not acceptable

**Life(Hardware & Software):** 15 - 20+ years minimum

# Infrastructure

## Infrastructure Key to Long-Term Sustainability

- 1) Physical Media
- 2) Communication Capability

# Physical Media

- 1) Electrical – Copper Wire
- 2) Electro-Magnetic – Radio Frequency
- 3) Light - Fiber Optic

# Electrical – Copper Wire

2-Wire (1 pair)

RS-485

EIA-709.3 (Free-Topology, FT)

Power Line (50/60 Hz)

- HD-PLC, HomePlug

8-Wire (4 pairs)

IEEE 802.3 (Ethernet)

# Radio Frequency

IEEE 802.11 (Wireless Local Area Networking, WLAN)

- Wi-Fi

IEEE 802.15 (Wireless Personal Area Networking, WPAN)

- Blue Tooth

- ZigBee, Thread (Mesh Networks)

# Cost of Ownership

- Installation
- Operating
- Maintenance
- End of Life

# Reliability Metrics

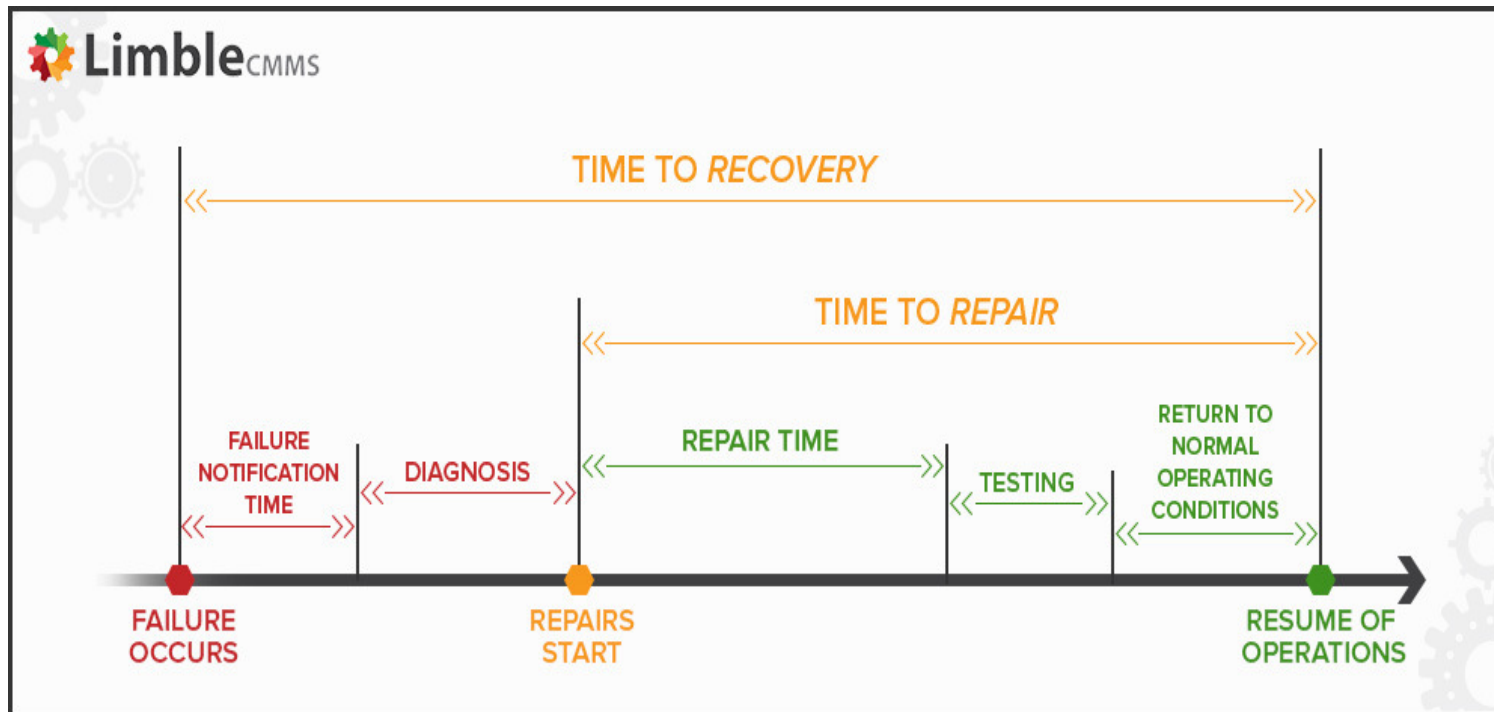

Equipment will fail:

- 1) MTTR (Mean Time To Repair)
- 2) MTTR (Mean Time to Recovery)
- 3) MTBF (Mean Time Between Failure)

For Repairable Products

- 4) MTTF (Mean Time To Failure)
- For Non-Repairable Products

# MTTR

# MTBF

$$\text{MTBF} = \frac{\text{total operational time}}{\text{total number of failures}}$$

# RJ45 Connection

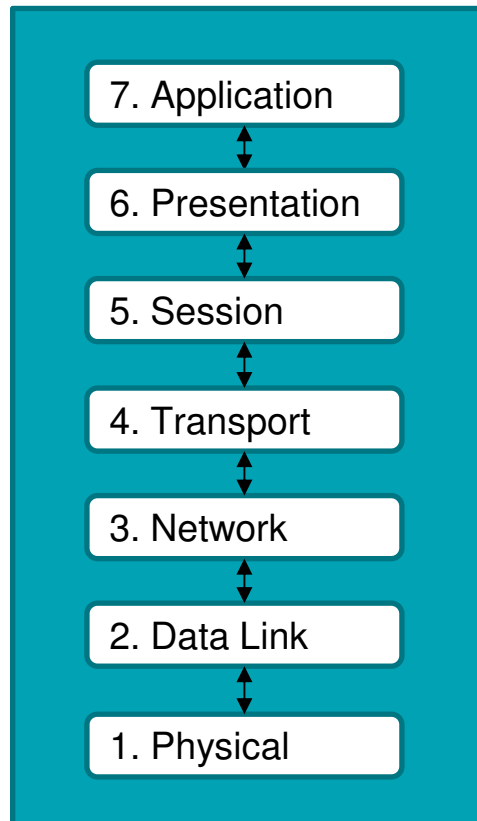

# RJ45 Connection

# Communication

OSI Model

Protocol

# Application Variables & Services

Application

BACnet

Objects  
Services

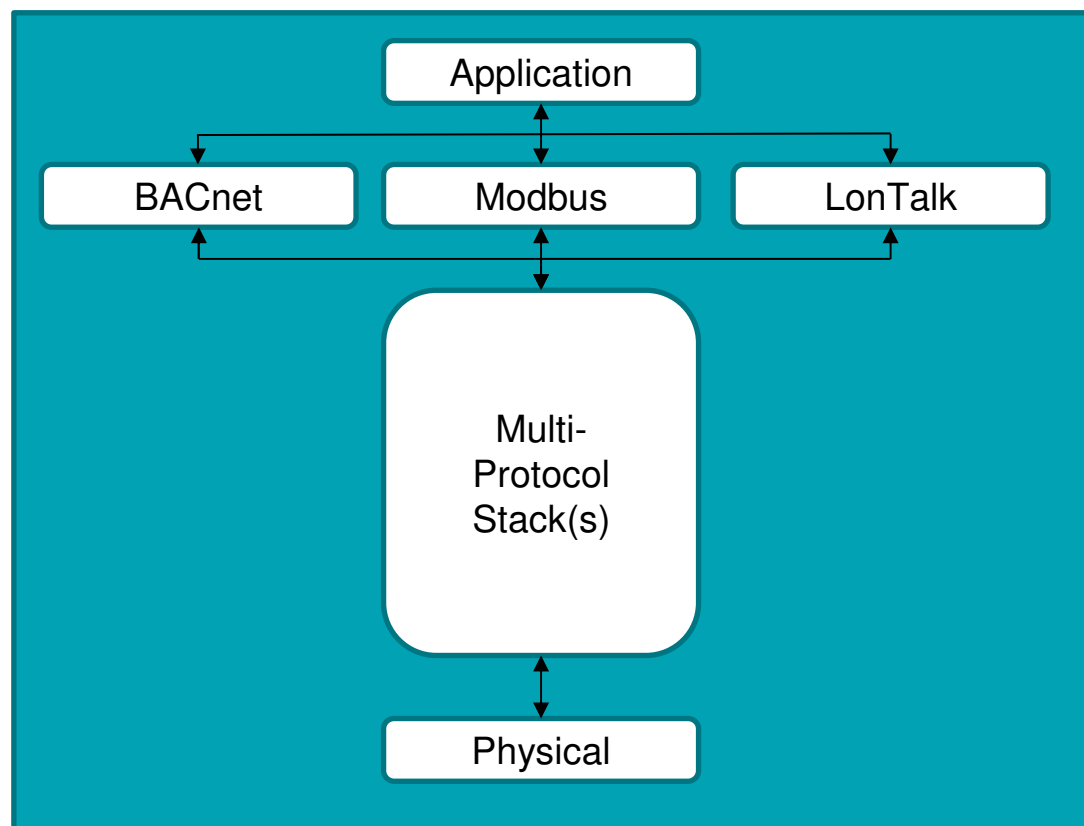

Modbus

Addresses  
Services (Function Codes)

LonTalk

Network Variables  
Commands

# Multi-Protocol

## Control Network Attributes

- Small Packets
- Lots of Packets
- No Single Point of Failure
- Noise Immunity
- Secure
- Peer-to-Peer

# Control Networks

- 1) Infrastructure that lasts
  - Copper Wiring
  - Connections
- 2) Field Proven Solutions
  - Cost Effective
  - Sustainable
- 3) Upgrade not Obsolete
  - Protocols

# Disrupting Technology
