

Version 1.0
May 2002
Elevator/Lift Fire-Systems Port : 140.41

LONMARK®

Functional Profile:

Vertical/Conveyer Transportation

Elevator/Lift Fire-Systems Port

Overview

This document describes the Functional Profile of an Elevator Fire Systems Object. Use of the standard Node object is implied. Each object controls the one elevator car group. Applications with more than one car group are accommodated by deploying multiple object instances (figure 2).

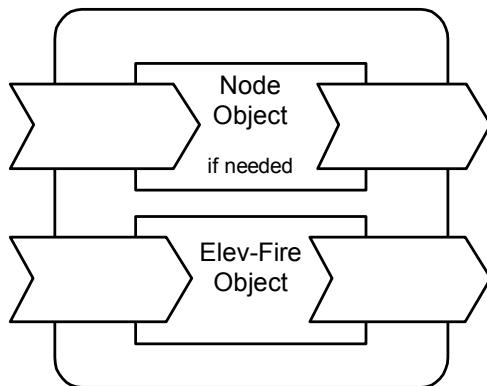

Figure 1 Node Concept

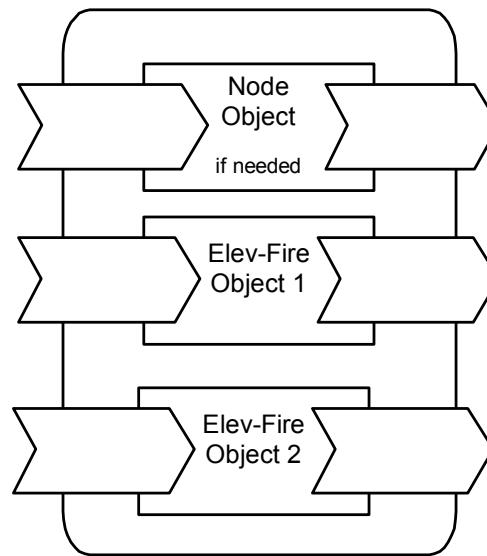

Figure 2 Multiple Object Instances

Example Usage

The services provided by this profile allow group(s) of elevator cars to accept fire signal information from fire control panels.

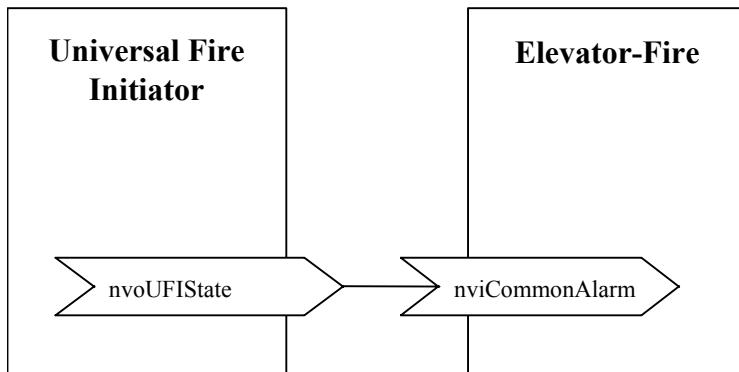

Figure 2 Example Usage of the Object

Object Details

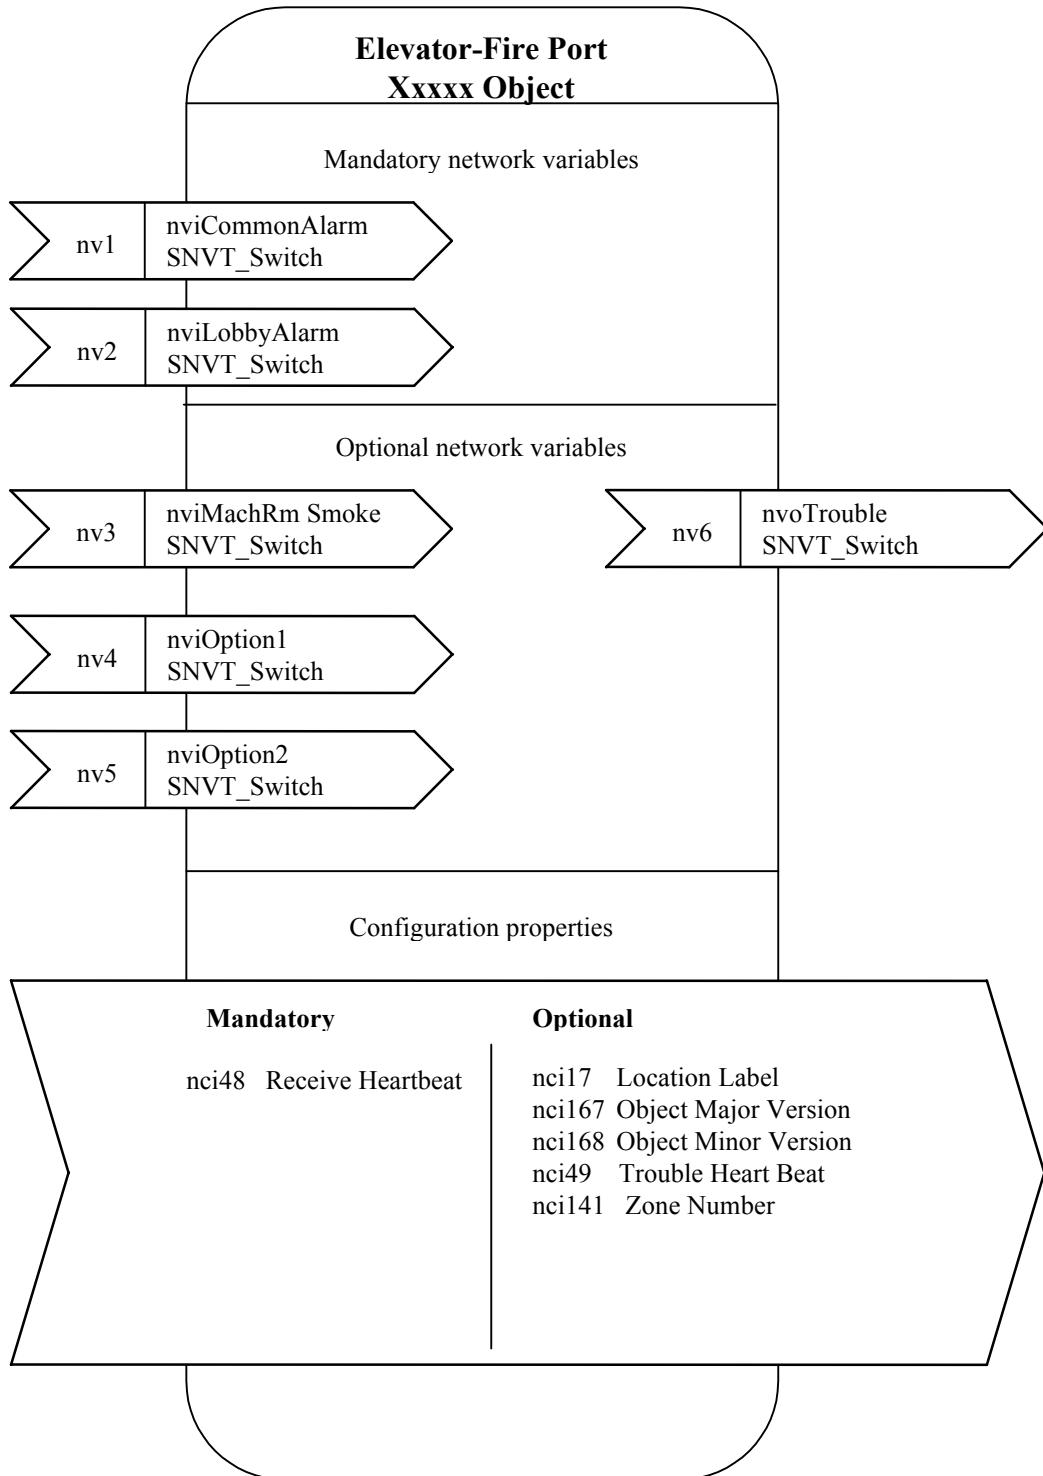

Figure 3 Object Details

Table 1 SNVT Details

NV # (M/O)*	Variable Name	SNVT Name	SNVT Index	Description
1 (M)	nviCommonAlarm	SNVT_Switch	95	Primary fire sensor input
2 (M)	nviLobbyAlarm	SNVT_Switch	95	Fire in Lobby sensor
3 (O)	nviMachRmSmoke	SNVT_Switch	95	Machine Room smoke sensor
4 (O)	nviOption1	SNVT_Switch	95	Whatever sensor you want
5 (O)	nviOption2	SNVT_Switch	95	Optional Sensor 2
6 (O)	nvoTrouble	SNVT_Switch	95	Elevator unable to respond to sensors

* M = mandatory, O = optional

Table 2 SCPT Details

Man. Opt. *	SCPT Name NV Name Type or SNVT	SCPT Index	Associated NVs **	Description
Man	SCPTmaxRcvTime nciReceiveHeartbeat SNVT_time_sec (107)	48	Entire Object	Ensure network connection
Opt	SCPTlocation nciLocation SNVT_str_asc (36)	17	Entire Object	Used to provide physical location of the node
Opt	SCPTobjMajVer nciObjMajVer unsigned short	167	Entire Object	Defines the major version number of the Object
Opt	SCPTobjMinVer nciObjMinVer unsigned short	168	Entire Object	Defines the minor version number of the Object
Opt	SCPTmaxSendTime nciTroubleHeartbeat SNVT_time_sec (107)	49	nvoTrouble	Maximum period of time that expires before the Object will automatically update nvoTrouble
Opt	SCPTzoneNum nciZoneNumber (141)	141	Entire Object	For use by Fire System

* Man = mandatory, Opt = optional

** List of NVs to which this configuration property applies.

Mandatory Network Variables

nviCommonAlarm Input

```
network input sd_string("@p|1") SNVT_Switch  
nviCommonAlarm;
```

This input network variable is the master fire signal to the elevator group controller.

Valid Range

Value	State	Action
ANY	0	Not Active
0	1	Not Active
>0	1	Active
ANY	0xFF	Undefined, No Action

Default Value

State = 0 Value=0.

Configuration Considerations

None specified.

nviLobbyAlarm Input

network input sd_string("@p|2") SNVT_Switch nviLobbyAlarm;

This input network variable is used to report fire in the lobby, so that alternate elevator action can be taken.

Valid Range

Value	State	Action
ANY	0	Not Active
0	1	Not Active
>0	1	Active
ANY	0xFF	Undefined, No Action

Default Value

State = 0 Value=0.

Configuration Considerations

None specified.

Optional Network Variables

nvoTrouble Output

```
network output sd_string("@p|6") bind_info(ackd) SNVT_Switch  
nvoTrouble;
```

This output network variable is used to report to the fire system that the elevator controller cannot respond to the fire signals.

Valid Range

Value	State	Action
ANY	0	Not Active
0	1	Not Active
200	1	Active
ANY	0xFF	Undefined, No Action

Default Value

State = 0 Value=0.

Configuration Considerations

The transmission of this NV is regulated by the time specified in the nciTroubleHeartbeat CP, unless the nciTroubleHeartbeat CP has a value of 0.0, or other invalid value; in which case, the NV is not regulated by the nciTroubleHeartbeat value.

When Transmitted

The output variable is transmitted:

- Upon node reset, after obtaining valid data.
- When the 'state' has changed.
- Regularly at the interval defined by the configuration variable nciTroubleHeartbeat.

Default Service Type

The default service type is acknowledged.

nviMachRmSmoke Input

network input sd_string("@p|3") SNVT_Switch nviMachRmSmoke;

This input network variable is used to indicate smoke or fire in the elevator machine room.

Valid Range

Value	State	Action
ANY	0	Not Active
0	1	Not Active
>0	1	Active
ANY	0xFF	Undefined, No Action

Default Value

State = 0 Value=0.

Configuration Considerations

None specified.

nviOption1 Input

network input sd_string("@p|4") SNVT_Switch nviOption1;

This input network variable is for whatever you want.

Valid Range

Value	State	Action
ANY	0	Not Active
0	1	Not Active
>0	1	Active
ANY	0xFF	Undefined, No Action

Default Value

State = 0 Value=0.

Configuration Considerations

None specified.

nviOption2 Input

network input sd_string("@p|5") SNVT_Switch nviOption2;

This input network variable is for whatever you want.

Valid Range

Value	State	Action
ANY	0	Not Active
0	1	Not Active
>0	1	Active
ANY	0xFF	Undefined, No Action

Default Value

State = 0 Value=0.

Configuration Considerations

None specified.

Configuration Properties

Receive Heartbeat (Mandatory)

network input config sd_string("¶,0\x80,48")
SNVT_time_sec nciReceiveHeartbeat;

This input configuration property sets the maximum period of time that can expire before the Object needs to be automatically updated with any of the input network variables:

Valid Range

The valid range is 1.0 to 3600.0 seconds.

Values outside this range are invalid and will disable the automatic update mechanism. A value of zero (0) will be used for the internal timer in cases where configured values are above 3600.0 seconds.

Default Value

The default value is 0.0 (no automatic update).

Configuration Requirements/Restrictions

This CP has no modification restrictions (no_restrictions). It can be modified at any time.

SCPT Reference

SCPTmaxSendTime (49)

Location Label (Optional)

```
network input config sd_string("&1, p, 0\x80, 17")  
SNVT_str_asc nciLocation;
```

This configuration property can be used to provide the location of the Object/node, where *p* is the Object index. The above code declaration is for providing the location of the Object. If it is preferred, the location of the node can be represented with the following code declaration:

```
network input config sd_string("&0, , 0\x80, 17")  
SNVT_str_asc nciLocation;
```

Valid Range

Any NULL-terminated ASCII string up to 31 bytes of total length (including NULL). The string must be truncated if the length does not allow the 31st character to be the NULL (0x00).

Default Value

The default value is an ASCII string containing 31 NULLs (0x00).

Configuration Requirements/Restrictions

This CP has no modification restrictions (no_restrictions). It can be modified at any time.

SCPT Reference

SCPTlocation (17)

Object Major Version (Optional)

```
network input config sd_string("&1,p,0\x84,167")  
unsigned short nciObjMajVer;
```

This configuration property can be used to provide the major version number of the Object when implemented on a device.

Valid Range

Any integer number from 1 to 255. Only 1-byte of information is accepted.

Default Value

The default value is one (1).

Configuration Requirements/Restrictions

This CP is a constant (const_flg). It is not to be modified except that it is allowable to modify the value in a download of new code to the device.

SCPT Reference

SCPTobjMajVer (167)

Object Minor Version (Optional)

```
network input config sd_string("&1,p,0\x84,168")  
unsigned short nciObjMinVer;
```

This configuration property can be used to provide the minor version number of the Object when implemented on a device.

Valid Range

Any integer number from 0 to 255. Only 1-byte of information is accepted.

Default Value

The default value is zero (0).

Configuration Requirements/Restrictions

This CP is a constant (const_flg). It is not to be modified except that it is allowable to modify the value in a download of new code to the device.

SCPT Reference

SCPTobjMinVer (168)

Trouble Heartbeat (Optional)

```
network input config sd_string("&1, p, 0\x84, 49")  
SNVT_time_sec nciTroubleHeartbeat;
```

This configuration property can be used to indicate to the fire system the elevator group's capacity to respond.

Valid Range

The valid range is 1.0 to 3600.0 seconds.

Values outside this range are invalid and will disable the automatic update mechanism. A value of zero (0) will be used for the internal timer in cases where configured values are above 3600.0 seconds.

Default Value

The default value is 0.0 (no automatic update).

Configuration Requirements/Restrictions

This CP has no modification restrictions (no_restrictions). It can be modified at any time.

SCPT Reference

SCPTmaxSendTime (49)

Zone Number (Optional)

```
network input config sd_string("&1,p,0\x84,141")
unsigned short ncizoneNumber;
```

This configuration property contains the zone number for the indicator device.

Valid Range

Defined by SNVT_count.

Default Value

Not specified.

Configuration Requirements/Restrictions

This CP has no modification restrictions (no_restrictions). It can be modified at any time.

SCPT Reference

SCPTzoneNum (141)

Key for Unresolved References

i, *j*, *k* are the indices of the CP-associated NVs in relation to their declaration order within the node, when implemented.

p is this Object's index relative to the node sd_string declaration, when implemented.

Data Transfer

None specified.

Power-up State

There is no immediate network action on Power-up State.

Boundary and Error Conditions

None specified.

Additional Considerations

None specified.
