

Fitting and Operating Instruction

High Pressure Sensors

General

A qualified installer has to carry out and to supervise mounting and first operation of the appliance

Description

The FEMA LON series is provided with default configuration settings from the factory (figure 3). Using standard Echelon configuration tool or LNS based tools, the sensor can be configured with job-specific settings. The power and bus connection is provided by a M12 plug (included in delivery).

Types:

SN1-355-L, SN3-355-L, SN6-355-L, SN10-355-L, SN25-355-L, FHBN1-355-L, FHBN3-355-L, FHBN5-355-L und FHBN10-355-L (SN025-355-L **see low pressure** sensor data sheet)

Connection diagramm

Safety Instruction !

Mounting

- Tighten only with the screwdriver applied to the hexagon of the pressure sensor.
- You never use housing as lever arm and do not turn the housing.

Electrical wiring and power

- The unit is supplied with 24VAC or 24 to 36VDC. With a DC power supply pay attention to correct polarity. The device can be destroyed if the connection is faulty.

Connect the appliance to the plug as shown in connection diagramm.

- You never apply a voltage higher 48 V to one of the terminals.

Operation LED (green)

LED task, error handling:	priority	set nvo_press invalid	set nvo_limit invalid	LED blink quantity (*) 1 = on 0 = off (16 steps)
LP_Status.VrefFail (1)	1	y	y	1010000000000000
LP_Status.LimitError (2)	2	n	y	1010100000000000
wink command active	3	n	n	1111111100000000
normal run	4	n	n	1111111111111111

(*) The duration of one step is: 150ms

- (1) Operation power too low
In this case the sensor element is measuring wrong pressure values.
All pressure values are set to invalid.
- (2) Low limit (nciLimitLow) is set higher than a high limit (nciLimitHigh).

The function of service LED and service button see Echelon documentation

Press service button

1. open the window
2. press button cautiously down (until service LED goes on)
3. Neuron ID is sending
4. close the window

Filtering (figure 1)

Safety Instruction

Do not touch the plane with the screw driver.

Safety Instruction

The higher the filter value (nciFilter rating)
The lower is the resulting peak and the
reaction time

Limits and Hysteresis

The graph in Figure 1 shows the main application.

An input voltage signal measured with the onboard ADC is converted to a pressure Value in the range between `nciRangeMin` and `nciRangeMax`. In this range four limit values can be activated:

(for low pressure application the names have a "P" added):

`nciLimitLow(P)1`, `nciLimitLow(P)2`, `nciLimitHigh(P)1`, `nciLimitHigh(P)2`.

When the LimitHigh values are reached (coming from low pressures) a relating alarm value (network output variable) is set:

`nciLimitHigh(P)1` sets `nvoLimitHigh1`,

`nciLimitHigh(P)2` sets `nvoLimitHigh2`.

When the LimitLow values are reached (coming from high pressures) a relating alarm value (network output variable) is set:

`nciLimitLow(P)1` sets `nvoLimitLow1`,

`nciLimitLow(P)2` sets `nvoLimitLow2`,

The alarm value for the LimitHighs is reset when the pressure value falls under the limit and its hysteresis:

`nciHystHigh(P)1` belongs to `nciLimitHigh(P)1`,

`nciHystHigh(P)2` belongs to `nciLimitHigh(P)2`.

The alarm value for the LimitLows is reset when the pressure rises over the limit and its hysteresis:

`nciHystLow(P)1` belongs to `nciLimitLow(P)1`,

`nciHystLow(P)2` belongs to `nciLimitLow(P)2`.

Alarm values (Figure 2)

Description of the used SNVT/ SCPT (figure 3)

This table shows all used standard network variables.

High pressure application with *Pressure Sensor Profile1030*
(all following NVs are used for this applications)

Network Variable / Self documentation string	SNVT type {Default value}	Range	Network outputs: Send conditions / Service	Description
nvoLimitHigh1 ("@0 # 2;")	SNVT_switch {OFF for delivery}	OFF = {0, false} ON = {200, true} invalid = {x, 255}	Any Change / acknowledge Service	Alarming ON if nvoPress is higher than nciLimitHigh1 OFF if nvoPress is lower than nciLimit1 - nciHystHigh1
nvoLimitLow1 ("@0 # 4;")	SNVT_switch {OFF for delivery}	OFF = {0, false} ON = {200, true} invalid = {x, 255}	Any Change / acknowledge Service	Alarming ON if nvoPress is lower than nciLimitLow1 OFF if nvoPress is higher than nciLimitLow1 + nciHystLow1
nvoLimitHigh2 ("@0 # 3;")	SNVT_switch {OFF for delivery}	OFF = {0, false} ON = {200, true} invalid = {x, 255}	Any Change / Service	Alarming ON if nvoPress is higher than nciLimitHigh2 OFF if nvoPress is lower than nciLimitHigh2 - nciHystHigh2
nvoLimitLow2 ("@0 # 5;")	SNVT_switch {OFF for delivery}	OFF = {0, false} ON = {200, true} invalid = {x, 255}	Any Change / acknowledge Service	Alarming ON if nvoPress is lower than nciLimitLow2 OFF if nvoPress is higher than nciLimitLow2 + nciHystLow2
